1 Explanation of symbols and safety instructions

1.1 Explanation of symbols

Warnings

In warnings, signal words at the beginning of a warning are used to indicate the type and seriousness of the ensuing risk if measures for minimising danger are not taken.

The following signal words are defined and can be used in this document:

 **DANGER**
DANGER indicates that severe or life-threatening personal injury will occur.

 **WARNING**
WARNING indicates that severe to life-threatening personal injury may occur.

 **CAUTION**
CAUTION indicates that minor to medium personal injury may occur.

NOTICE
NOTICE indicates that material damage may occur.

Important information

 The info symbol indicates important information where there is no risk to people or property.

Additional symbols

Symbol	Meaning
▶	a step in an action sequence
→	a reference to a related part in the document
•	a list entry
–	a list entry (second level)

Table 1

1.2 General safety instructions

Notices for the target group

These operating instructions are intended for the heating system operator.

All instructions must be observed. Failure to comply with instructions may result in material damage and personal injury, including danger to life.

- ▶ Read and retain the operating instructions (heat generator, heating controller, etc.) prior to operation.
- ▶ Observe the safety instructions and warnings.
- ▶ Operate the heat generator only with the casing fitted and closed.

Determined use

The product may only be used for the heating of boiler water and for DHW heating.

Any other use is considered inappropriate. We assume no liability for damage occurring due to non-permitted use.

If you smell gas

A gas leak could potentially cause an explosion. If you smell gas, observe the following rules:

- ▶ Prevent flames or sparks:
 - Do not smoke, use a lighter or strike matches.
 - Do not operate any electrical switches or unplug any equipment.
 - Do not use the telephone or ring doorbells.
- ▶ Turn off the gas at the meter or regulator.
- ▶ Open windows and doors.
- ▶ Warn your neighbours and leave the building.
- ▶ Prevent anyone from entering the building.
- ▶ Move well away from the building: call the National Gas Emergency Service on 0800 111 999.
- ▶ L.P.G. boilers: Call the supplier's number on the side of the gas tank.

Danger to life from poisoning by flue gas

There is a danger to life from escaping flue gas.

▶ Never modify any parts through which flue gas is routed.

If flues are damaged or leaking, or if you smell flue gas, observe the following rules.

- ▶ Switch off the heat source.
- ▶ Open doors and windows
- ▶ Warn your neighbours and leave the building immediately.
- ▶ Prevent third parties from entering the building.
- ▶ Notify an approved contractor.
- ▶ Have any defects rectified.

Danger to life from carbon monoxide

Carbon monoxide (CO) is a poisonous gas, which arises during the incomplete combustion of fossil fuels such as oil, gas or solid fuels.

Dangers arise, if carbon monoxide escapes from the heating system due to a fault or a leak and collects unnoticed in enclosed spaces.

You can neither see, taste nor smell carbon monoxide.

To avoid danger from carbon monoxide:

- ▶ Have the heating system inspected and serviced regularly by an approved contractor.
- ▶ Use a CO detector, which gives an alarm in good time if CO escapes.
- ▶ If you suspect a CO leak:
 - Warn your neighbours and leave the building immediately.
 - Call an approved contractor.
 - Have any defects rectified.

Inspection, cleaning and maintenance

The user is responsible for ensuring the heating system is safe and environmentally compatible.

Non-existent or improper inspection, cleaning and maintenance may result in personal injury, including danger to life or material damage.

We recommend that you enter into a contract covering an annual inspection and responsive cleaning and maintenance with an approved contractor.

- ▶ Have work carried out only by an approved contractor.
- ▶ Have the heating system inspected by an approved contractor at least once a year.
- ▶ Have any required cleaning or maintenance work carried out immediately.
- ▶ Have any defects in the heating system remedied immediately, independent of the annual inspection.

⚠ Fittings and modification

Only a competent engineer can remove the appliance case and carry out any work, in accordance with the relevant Installation Regulations.

Any misuse or unauthorised modifications to the appliance, flue or associated accessories and heating system will invalidate the guarantee.

- ▶ Do not modify the appliance or flue system in any way.

Bosch Group accepts no liability arising from any such actions. This does not affect your statutory rights.

⚠ Combustion air/ambient air

The air in the installation location must be free of flammable or chemically aggressive substances.

- ▶ Do not store or use any flammable or explosive materials (paper, petrol, thinners, paints, etc.) in the vicinity of the heat source.
- ▶ Do not store or use any corrosive substances (solvents, adhesives, chlorinated cleaning agents, etc.) in the vicinity of the heat source.

⚠ General considerations

- ▶ The boiler must be installed in a well ventilated area. The openings must be kept in good condition.
- ▶ The vents or any other component contributing to the functioning of the boiler must not be reduced or sealed.
- ▶ We recommend an annual service of the appliance by an approved engineer to ensure reliable and efficient operation.

⚠ Safety of electrical devices for domestic use and similar purposes

The following requirements apply in accordance with EN 60335-1 in order to prevent hazards from occurring when using electrical appliances:

“This appliance can be used by children of 8 years and older, as well as by people with reduced physical, sensory or mental capabilities or lacking in experience and knowledge, if they are supervised and have been given instruction in the safe use of the appliance and understand the resulting dangers. Children shall not play with the appliance. Cleaning and user maintenance must not be performed by children without supervision.”

“If the power cable is damaged, it must be replaced by the manufacturer, its customer service department or a similarly qualified person, so that risks are avoided.”

⚠ Please read these instructions carefully

- ▶ These instructions are applicable to the Bosch appliance model/s stated on the front cover only.
- ▶ These instructions apply in the UK/IE only and must be followed except for any statutory obligation.

2 Product Information

2.1 Declaration of Conformity

2.1.1 Declaration of conformity

The design and operating characteristics of this product comply with the European and national requirements.

 The CE marking declares that the product complies with all the applicable EU legislation, which is stipulated by attaching this marking.

The complete text of the Declaration of Conformity is available on the Internet: worcester-bosch.ie.

2.1.2 Simplified EU Declaration of Conformity regarding radio equipment

Bosch Thermotechnik GmbH hereby declares, that the product Condens 8000 described in these instructions complies with the Directive 2014/53/EU.

The complete text of the EU Declaration of Conformity is available on the Internet: worcester-bosch.ie.

2.2 Appliance identification and serial number

Fig. 1 Position of data label

The data label contains information of the appliance model and serial number. This is located on the frame of the front cover.

For your own records

Please ensure that the Commissioning Checklist has been completed by your installer or service engineer.

Model:	
Serial number:	
Date of installation:	

Table 2 Appliance details

The appliance model and serial number can be found on the appliance data label.

2.3 Servicing

Ensure that the service engineer completes the Service Record in the Benchmark Checklist after each service.

The Service Record can be found at the rear of the appliance's Installation and Maintenance Instructions. It will be required in the event

of any guarantee work and may be required by the local Building Control Inspector.

- ▶ To ensure the continued safe, reliable and environmentally optimum operation of the boiler, it must be thoroughly serviced annually by a competent, qualified person, such as a Worcester service engineer, British Gas engineer or other Gas Safe registered engineer. In the Republic of Ireland servicing work must be carried out by a Worcester service engineer or other Registered Gas Installer (RGII).
 - Having a contract covering annual servicing, cleaning and maintenance is a good way to ensure this is not missed.
 - It is important that any required maintenance or repairs are carried out without delay.
- ▶ Ensure that the service engineer completes the Service Record, at the rear of the Installation and Maintenance Instructions manual, after each service.
- ▶ Have any work carried out by a competent, qualified person, Worcester service engineer, British Gas engineer or other Gas Safe registered engineer. In the Republic of Ireland servicing work must be carried out by a Worcester service engineer or other Registered Gas Installer (RGII).
- ▶ Always use original spares, to help maintain the efficiency, safety and reliability of the appliance.

2.4 Maintaining your appliance

Your new appliance represents a long term investment in a reliable, high quality product.

Wipe the appliance casing with a soft clean cloth. Please do not use chemical cleaning products which may damage the paint finish.

In order to realise the appliance's maximum working life, and to ensure the appliance continues to operate at peak efficiency and performance, it is essential that servicing and maintenance checks are performed at least once a year by a competent engineer in accordance with the current Gas Safe Regulations.

If you would like to know more about servicing options from Bosch, please visit www.worcester-bosch.ie

Please tick the appropriate box on your warranty registration card for further details of the Bosch Service Contract.

When your appliance requires servicing please contact a Bosch contact centre (see rear cover, appointments).

In addition to the service contract we are pleased to offer a one-off annual service or breakdown call out for your appliance.

Maintenance tips

- Appliances on a sealed heating system:
 - Regularly check the system pressure.
- Do not obstruct the flue outlet or the air inlet.
- Use in hard water areas:
 - In exceptionally hard water areas a device to prevent scale formation should be fitted. Installation of a salt based water softener should be in accordance with the requirements of the local water company. A bypass valve must be fitted and used to fill/top up the heating system with untreated water.

Important note:

- ▶ If you have to add water regularly in your heating system, call a competent, qualified person.

2.5 Benchmark standard

The Benchmark initiative is a code of practice to encourage the correct installation, commissioning and servicing of domestic central heating appliances and system equipment.

A "checklist" is dispatched with every appliance and can be found towards the back of the Installation, Commissioning and Servicing Instructions. This is a vital document that needs to be completed by the installer at the time of installation. It confirms that the appliance has been installed and commissioned according to the manufacturer's instructions.

The service record provides space for the recording of regular servicing of the appliance/heating system and this can become a valuable document when, for example, you wish to sell the property. The service record will show a potential purchaser that the heating system has received regular professional maintenance and servicing during its lifetime.

The Benchmark initiative aims to:

- Raise standards among professional installers.
- Build and maintain high safety standards in the industry.
- Improve customer satisfaction levels.
- Make a contribution to the nation's commitment to climate change.

3 Prepare for operation

3.1 Open vented heating system

Appliances that can be connected to open vented heating systems will have the pressure maintained automatically by the header cylinder feeding the system.

3.2 Appliances converted to sealed primary system

3.2.1 Constantly re-pressurising the system

Constantly having to re-pressurise the heating system should be investigated as it is an indicator of potential leaks and the concentration of inhibitor protection in the system will be reduced; this can result in corrosion within the heating system, reducing efficiency and increasing contaminates.

- ▶ Check for leaks on heating system (pipework and radiator valves).
- ▶ Contact your installer or maintenance engineer if a recurring significant decrease or increase in pressure is shown on the pressure indicator (pressure gauge or pressure display).

System pressure increasing:

- ▶ If the system pressure repeatedly increases and you need to vent air from the radiators, refer to → section 9.5 "System gassing troubleshooting", page 12.

3.2.2 Topping up the system pressure

External filling loop

Once the external filling loop and the external pressure gauge have been located, follow the instructions for re-pressurising the system.

- ▶ Unscrew the blanking cap [1].
- ▶ Attach the hose [2] to the valve.
 - Usually one end of the hose is already connected to one of the system fill isolation valves.
- ▶ Ensure both ends [3] of the hose are screwed on hand tight.
- ▶ Monitor the pressure via the external pressure gauge.
 - The system fill isolation valves [4] are in a closed position (the handle/screwdriver slot is across the valve).
- ▶ Turn the handle/screwdriver slot through 90° to open valves and slowly fill the system.
 - The system fill isolation valves [5] are opened (the handle/screwdriver slot is in-line with the valve).
 - The pressure at the display will start to rise.
- ▶ Set the pressure between 1 and 1.5 bar pressure.
- ▶ Turn the handles/screwdriver slots back, through 90°, to close the valves.
 - The system fill isolation valves [6] are in a closed position (the handle/screwdriver slot is across the valve).
- ▶ Top up the system pressure, if as a result of the air bleeding the pressure drops off.

Once the pressure has settled between 1 and 1.5 bar.

- ▶ Ensure the valves are closed.
- ▶ Remove the hose [2] and replace the blanking cap [1].

Fig. 2

If the pressure reads more than 1.5 bar as a result of over filling:

- ▶ Bleed one radiator until the pressure gauge returns to between 1 and 1.5 bar.

4 Operating the appliance

4.1 Control panel overview

Fig. 3 Overview

- [1] Display.
- [2] ▲ and ▼ buttons: To navigate through menus and increase/decrease settings.
- [3] ↶ button: Return/back.
- [4] **ok** button¹⁾: Selection/save settings.
- [5] Menu button.
- [6] Hot water button: Not applicable for regular appliances.
- [7] Heating button: Heating mode on/off, set the maximum flow temperature.
- [8] Burner display: Illuminates when the burner is alight.

4.2 Overview of keys

Key	Function
	Heating <ul style="list-style-type: none"> Heating mode
	Domestic Hot Water (DHW) <ul style="list-style-type: none"> DHW mode (not applicable for regular appliances)
	Menu <ul style="list-style-type: none"> Access to menus
ok ¹⁾	Select/save <ul style="list-style-type: none"> Confirm a selection Save setting DHW eco/preheat
	Back arrow <ul style="list-style-type: none"> Exit menu (without saving changes)
	Up arrow <ul style="list-style-type: none"> Menu navigation Increase values
	Down arrow <ul style="list-style-type: none"> Menu navigation Reduce values

1) When the display is in power save mode the **ok** button will re-activate the screen

1) When the display is in power save mode the **ok** button will re-activate the screen

Table 3 Overview of keys

4.3 Symbols in the display

Symbol	Explanation
	Connection with the Wi-Fi network (only available with accessories)
	Connection with RF transmitter, e.g. Comfort+ II RF room thermostat (only available with Key accessories)
	Central heating adjustment auto: Heating is switched on and off according to programmed times for heating . Advance: Move to the next on or off time and directly switch on or off heating.
	Central heating off
	Hot water adjustment (not applicable for regular appliances)
	Hot water off (not applicable for regular appliances)
	Displays with the appliance status code and diagnostic code during a fault condition.
	Holiday symbol
	Cleaning mode to enables the boiler to be cleaned without making changes to the touch panel.
	Central heating or hot water can be switched either permanently on or off.
	Energy consumption ¹⁾
	Gas consumption

1) The energy values shown are an estimation based on internal data of the appliance. Under real world conditions, many factors influence the energy consumption and the shown values will deviate from the values of an energy meter. The information is for indication only and should not be used for billing purposes. The values can be used for relative comparison of energy consumption between different days/weeks/month.

Table 4 Symbols in the display

The heating and hot water settings have been adjusted by the installer to the appliance's optimum settings.

► Before making any adjustments it is advisable to make a note of these settings so that you can return to these optimum settings in the future.

4.4 Adjusting the appliance flow temperature

4.4.1 Heating key

The heating key is used to set the max. flow temperature. The maximum flow temperature can be set between 30 °C and 88 °C¹⁾. The current flow temperature is shown on the display.

With underfloor heating systems observe the maximum permissible flow temperature.

- ▶ Press the **III** key.
The set maximum flow temperature appears.
- ▶ Press the **▲** or **▼** keys to set the desired maximum flow temperature.

Supply temperature	Sample application
Approx. 50 °C	Underfloor heating system
Approx. 75 °C	Radiator heating system
Approx. 82 °C	Convactor heating system

Table 5 Maximum flow temperature

- ▶ To save the setting, press the **ok** key or wait for 2 seconds.
The symbol **✓** appears for a short time.

If a time program is activated and set on **S auto** press the **ok** key to switch to **S Advance**. Time programs are available with Key (accessories).

S auto: Heating is switched on and off according to programmed times for heating.

S Advance: Switch to **S Advance** to move to the next on or off time and directly switch on or off heating.

4.5 Hot water mode

Hot water temperature adjustment.

- ▶ Adjust the cylinder temperature thermostat on the cylinder to the required temperature.

Temperature adjustment dial examples → figure 4.

Fig. 4 Hot water cylinder thermostat temperature dial examples

- [1] Indicator dial with arrow
- [2] Dial with settings values

5 Key (accessories)

5.1 Installing the Key

Installing the Key will enable additional functions. For Pairing → Key manual.

Always turn off the power to the appliance before installing Key (accessories).

- ▶ Plug Key into Key housing.

Fig. 5 Position of Key housing

Fig. 6 Locking mechanism

- ▶ The lever [2] of the locking mechanism is located right hand side of the Key housing. Ensure that it is in its Open position before inserting the Key and pulling lever [2] towards front.
- ▶ Turn on the power.
LED [1] starts blinking green.
- ▶ Wait until LED is constantly yellow.

1) The maximum value can be reduced by the service technician.

5.2 Key LED

Key LED status

The LED on the Key displays different states with flashing or constant colours.

Description of the LED displays	Example
Flashing red: Fault, e.g. no communication between the Key and appliance: ▶ Install the Key again, restore the last functioning status.	
Flashing yellow: No fault, user please wait.	
Flashing green: No fault, initialisation process is running.	
Constant red: Temporary fault: ▶ Wait for normal operating condition to be resumed.	
Constant yellow: No fault, time and date not available: ▶ Set the time and date on the appliance. -or- ▶ Key with touch-sensitive indicator: Press touch-sensitive indicator on Key to start pairing.	
Constant green: No fault, normal operating condition.	
LED Off: No fault, power-saving mode or appliance without power.	

Table 6 LED status

6 Shutdown

6.1 Setting frost protection

NOTICE

Risk of damage to the system from frost!

The heating system can freeze up after a prolonged period (e.g. during a power failure, switching off the power supply, faulty fuel supply, boiler fault etc.).

- ▶ Ensure that the heating system is in constant use (particularly when there is a risk of frost).

If you are leaving your property unoccupied during cold weather, please leave your external programmer on constant and your room thermostat set to 12 °C.

7 Thermal disinfection

To prevent hot water from becoming contaminated by bacteria such as legionella, we recommend thermal disinfection after long downtimes.

CAUTION

Risk of scalding.

During thermal disinfection, discharging unmixed hot water can cause serious scalding.

- ▶ Only use the maximum adjustable hot water temperature for thermal disinfection.
- ▶ Inform occupants of the premises of the risk of scalding.
- ▶ Perform thermal disinfection outside of the normal operating times.
- ▶ Do not discharge DHW unmixed.

Proper thermal disinfection involves the DHW system including the draw-off points.

- ▶ Set the thermal disinfection in the hot water program of the heating controller (→ heating controller operating instructions).
- ▶ Close DHW draw-off points.
- ▶ Set any DHW circulation pump to continuous operation.
- ▶ Wait until the maximum temperature is reached.
- ▶ Open all DHW draw-off points, from the nearest to the one furthest away, and draw off hot water until hot water at a minimum of 70 °C has flown from all draw-off points for at least 3 minutes.
- ▶ Restore the original settings.

8 Clearances and ventilation information

8.1 Appliance clearances

Your installer will have provided adequate space around the appliance for operation, safety and servicing/maintenance access.

- The following detail the necessary clearance around the appliance for service and maintenance.

CAUTION

Risk of damage to appliance or property

The appliance will overheat if the clearance space around the appliance is restricted by objects.

- ▶ Do not restrict this space with the addition of cupboards, shelves etc. next to or around the appliance.
- ▶ Do not store any combustible materials on or next to the appliance, such as clothes, towels, paper or plastic bags.

Fig. 7 Appliance minimum clearances

Minimum clearances		
	Description	Dimensions [mm]
X	Appliance width	440
Y	Appliance height	780
Z	Appliance depth	365
Installation/Maintenance		
1	Overall clearance height	1,150/1,190*
2	Overall clearance depth	965
3	In front of appliance	450
4	Overall clearance width	450
5	Above the appliance	170/210*
6	Either side of appliance	5
7	Below the appliance	200
8	Compartment depth	385
9	Appliance to removable door	20
10	Min clearance to the floor	400

Table 7

[*] Height for either 60/100 flue or 80/125 flue

8.2 Ventilation information

The air supply must not be restricted or contaminated.

Ventilation considerations

- ▶ Do not place objects to hinder the air circulation required by the appliance.
- ▶ The installation premises may require ventilation to be fitted according to its features or use.

9 Malfunction or failure

If you believe there is a problem with your central heating or hot water supply, before you contact your installer/maintenance engineer and report the error and appliance type carry out the following checks.

Basic checks

Some items to check before placing a call are:

- Is the electrical power switched on to the appliance?
- Is the programmer/timer set to ON or in an ON period?
- Is the room thermostat set too low?
- Is the cylinder thermostat (if fitted) set too low?
- Is the cold water main turned on?
- Sealed heating system:
 - Is the static system pressure (when appliance is cold) between 1 and 1.5 bar?
- Do you have gas?
 - Are other gas appliances working, gas cooker/hob for example?
 - Has your credit run out on your gas pre-payment meter?

Details of your installer should be available in the Commissioning Checklist or can be recorded in the following section.

Installer/maintenance engineer

Installer/maintenance engineer details

Engineer name:

Company name:

Company address:

Telephone:

Email:

Table 8

Bosch

The appliance is supported in EIRE by Bosch.

Specialist service engineers are available to attend an appliance breakdown.

Invoices for attendance and repair work carried out on this appliance by any third party will not be accepted.

- No charge will be made for parts and/or labour providing:
 - The appliance fault is found and the appliance is within the guarantee period. Reasonable evidence of this must be supplied on request. i.e. a completed Commissioning and service record and has been regularly serviced at least once a year.
- A call-out charge will be made where:
 - The appliance is outside the guarantee period or has not been serviced in accordance with the manufacturers instructions.
 - Our Field Service Engineer finds no fault with the appliance.
 - The cause of breakdown is misuse or with other parts of your plumbing/heating system, or with equipment not supplied by Bosch.

No appliance fault is found on over 30% of all service calls.

- ▶ In the case of a suspected fault, refer to the basic checks earlier in this section.

In the event of an appliance fault or breakdown please contact Bosch appointments team on 0330 123 9339. Your advisor will arrange for an engineer to call with the minimum of delay; under normal circumstances this will be from 1–3 working days (excluding weekends and bank holidays) for priority breakdown situations (no hot water and/or heating).

9.1 Troubleshooting (fault reset)

If there is fault in the system, there will be a message shown on the display with an icon on the right up corner. The color of this icon depends on the severity of the fault in the system. The cause of the fault is coded (e.g. fault code 232) and displayed as text.

- ▶ Press the ▲ and ▼ keys until **Reset** is displayed. The appliance starts up again and the current supply temperature is displayed.

If a fault persists:

- ▶ Contact the contractor or the customer service.
- ▶ Provide them with the displayed fault code and the device data (→ table 5).

9.2 Fault 2980

CAUTION
Fault 2980

- ▶ If fault 2980 is visible on the boiler display then contact a qualified heating engineer immediately. Do not attempt to remedy the fault otherwise there is a chance this could lead to a serious, safety-related fault. Heating and hot water will not be available until remedied by a qualified heating engineer.

9.3 Troubleshooting

If there is fault in the system, there will be a message shown on the display. The cause of the fault is coded (e.g. fault code 232).

- ▶ Press the ▲ and ▼ keys together until fault disappears. The appliance starts up again and the current supply temperature is displayed.

If a fault persists:

- ▶ Contact the contractor or the customer service.
- ▶ Provide them with the displayed fault code and the device data (→ table 2).

9.4 Extreme cold weather

In certain instances where the condensate pipework is run externally or in an unheated area, such as a garage, the condensate pipework can be at risk of freezing, even if well insulated.

A frozen/blocked condensate pipe will cause the boiler to shut down. Bosch have available helpful videos on thawing frozen condensate pipe work on our website in the Customer Service section.

WARNING
Falling hazard!

Failure to follow this guidance may result in personal injury.

- ▶ Only attempt to thaw a condensate pipe that is at ground level and easily accessible.
- ▶ Never attempt to thaw a condensate pipe that is at height.

CAUTION
Risk of damage to pipe work!

Thermal shock from boiling water can damage plastic pipes.

- ▶ **DO NOT** use boiling water to thaw the condensate pipe!

CAUTION
Slip hazard

- ▶ Ensure that the subsequent freezing of any water does not result in a slip hazard.

If the condensate pipe has frozen:

- ▶ Locate the blockage.
 - It is likely that the pipe is frozen at the most exposed point outside the building or where there is an obstruction to flow. This could be the open end of the pipe, at a bend or elbow, or where there is a sag in the pipe in which condensate can collect.
 - The location of the blockage should be identified as closely as possible before taking further action.
- ▶ Thaw the frozen pipe.
 - The pipe can be thawed by applying a hot water bottle, a microwaveable heating pack (the sort used for muscular aches and pains) or a cloth soaked in hot water to the exterior of the pipe, close to the point of blockage.
 - Hot water, but not boiling, can also be poured onto the pipe from a watering can or similar container.
 - Care must be taken at pedestrian areas where this water may freeze and create a slip hazard.
- ▶ Bosch have available on our website helpful videos in the Customer Service section to aid in thawing a frozen pipe.
- ▶ Reset the appliance and wait two or three minutes for the appliance to restart.
- ▶ Contact Bosch Appointments Team on: 0330 123 9339, if the boiler does not restart.
- ▶ Contact your installer in order to find a permanent solution to the problem.

9.5 System gassing troubleshooting

 **WARNING**

Caution must be exercised when venting radiators or adjusting system pressure after commissioning of your boiler.

Do not repeatedly vent your radiators, if symptoms persist, contact a heating engineer.

- ▶ Do not vent air from radiators whilst the central heating is switched on; turn your boiler off.
- ▶ Whilst venting radiators, do not allow the pressure on the boiler to drop below the pressure at which it is normally set.

 **CAUTION**

If the pressure in your heating system is repeatedly rising (this can be checked via the boilers pressure gauge or digital display and should be checked when the system is cold), and especially if you need to keep venting the radiators, urgent action is required and you must contact a heating engineer. This can indicate that there is corrosion occurring within the heating system

Note: Ensure the reading stays between minimum and maximum operating pressures at all times whilst the boiler is operating

- ▶ This must be properly addressed to prevent serious damage to the entire system.
- ▶ Failure to properly maintain the heating system may affect your warranty.

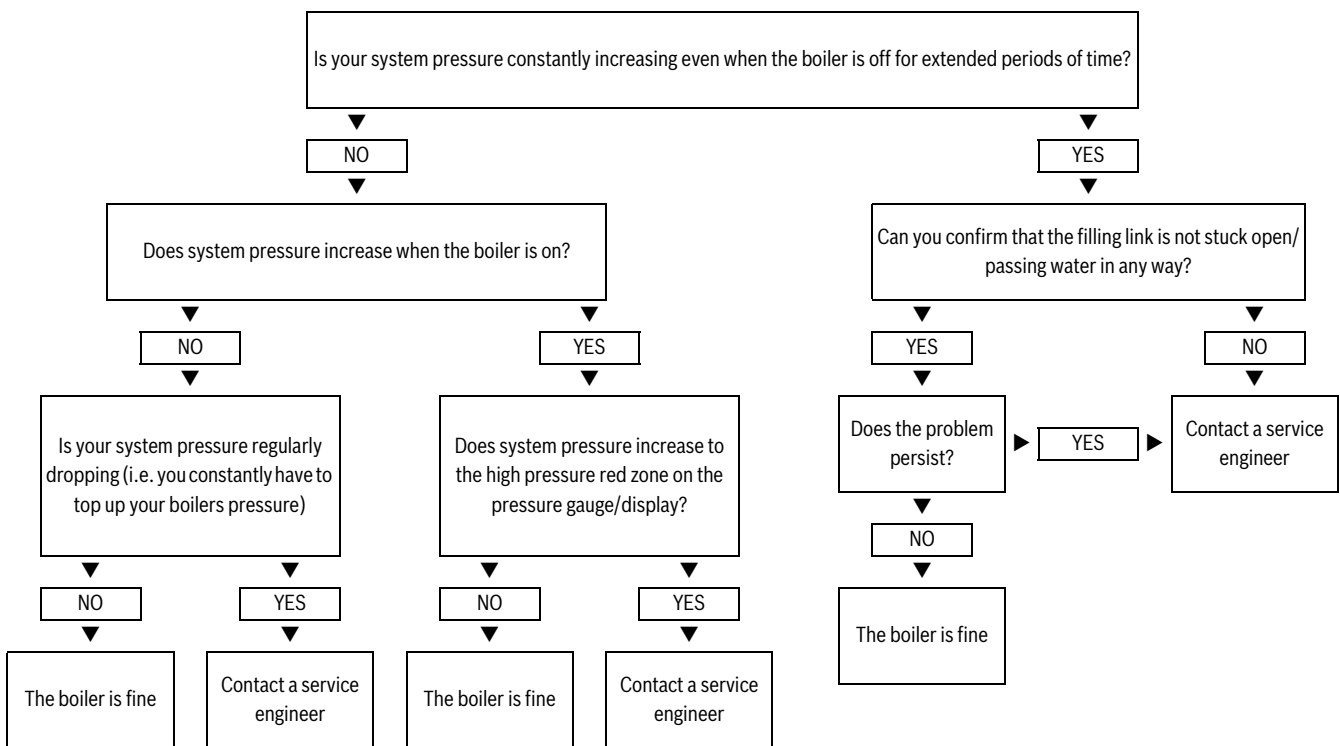

Table 9 System gassing flow chart

10 Environmental protection and disposal

Environmental protection is a fundamental corporate strategy of the Bosch Group.

The quality of our products, their economy and environmental safety are all of equal importance to us and all environmental protection legislation and regulations are strictly observed.

We use the best possible technology and materials for protecting the environment taking account of economic considerations.

Packaging

Where packaging is concerned, we participate in country-specific recycling processes that ensure optimum recycling.

All of our packaging materials are environmentally compatible and can be recycled.

Used appliances

Used appliances contain valuable materials that can be recycled.

The various assemblies can be easily dismantled. Synthetic materials are marked accordingly. Assemblies can therefore be sorted by composition and passed on for recycling or disposal.

Old electrical and electronic appliances

This symbol means that the product must not be disposed of with other waste, and instead must be taken to the waste collection points for treatment, collection, recycling and disposal.

The symbol is valid in countries where waste electrical and electronic equipment regulations apply, e.g. "(UK) Waste Electrical and Electronic Equipment Regulations 2013 (as amended)". These regulations define the framework for the return and recycling of old electronic appliances that apply in each country.

As electronic devices may contain hazardous substances, it needs to be recycled responsibly in order to minimize any potential harm to the environment and human health. Furthermore, recycling of electronic scrap helps preserve natural resources.

For additional information on the environmentally compatible disposal of old electrical and electronic appliances, please contact the relevant local authorities, your household waste disposal service or the retailer where you purchased the product.

You can find more information here:

www.bosch-homecomfortgroup.com/en/company/legal-topics/weee/

Batteries

Batteries must not be disposed together with your household waste. Used batteries must be disposed of in local collection systems.

11 Data Protection Notice

We, **Bosch Thermotechnology Ltd., Cotswold Way, Warndon, Worcester WR4 9SW, United Kingdom**

process product and installation information, technical and connection data, communication data, product registration and client history data to provide product functionality (art. 6 (1) sentence 1 (b) GDPR

/ UK GDPR), to fulfil our duty of product surveillance and for product safety and security reasons (art. 6 (1) sentence 1 (f) GDPR / UK GDPR), to safeguard our rights in connection with warranty and product registration questions (art. 6 (1) sentence 1 (f) GDPR / UK GDPR) and to analyze the distribution of our products and to provide individualized information and offers related to the product (art. 6 (1) sentence 1 (f) GDPR / UK GDPR). To provide services such as sales and marketing services, contract management, payment handling, programming, data hosting and hotline services we can commission and transfer data to external service providers and/or Bosch affiliated enterprises. In some cases, but only if appropriate data protection is ensured, personal data might be transferred to recipients located outside of the European Economic Area and the United Kingdom. Further information are provided on request. You can contact our Data Protection Officer under: Data Protection Officer, Information Security and Privacy (C/ISP), Robert Bosch GmbH, Postfach 30 02 20, 70442 Stuttgart, GERMANY.

You have the right to object, on grounds relating to your particular situation or where personal data are processed for direct marketing purposes, at any time to processing of your personal data which is based on art. 6 (1) sentence 1 (f) GDPR / UK GDPR. To exercise your rights, please contact us via privacy.ttgb@bosch.com To find further information, please follow the QR-Code.

12 Tips on energy saving

Heating economically

The appliance provides a high level of comfort whilst keeping fuel consumption and the environment effects as low as possible.

The appliance is controlled in such a way that it delivers heat at the correct rate and only if there is a clear demand from the system.

Central heating systems with thermostatic radiator valves

With modern heating systems set around a 20 °C heat loss, the optimum setting for a condensing boiler will be approximately 65 °C for the central heating temperature. This is to ensure a return temperature of less than 52 °C.

The system must be balanced correctly and the radiators may need upgrading. This allows the boiler to condense as much as possible for the central heating system.

The temperature of each room can be set individually (except primary room with the room thermostat) using the thermostatic radiator valves.

Room thermostats

Reducing the setting of the room thermostat by 1 °C can reduce fuel consumption by up to 10%.

New control systems

Upgrade your heating control system if necessary with the latest equipment available.

Roof insulation

Around 30% of the heat loss from a property is through the roof. Replace any old insulation with new insulation, preferably of around 200mm thickness or more.

Window frames

Single glazed windows, particularly those with steel frames, can lose a great deal of heat. Consideration should be given to replacement with PVCu or wooden framed double glazed units.

Radiators

If a radiator is sited underneath a window, its performance will be affected if the curtains are allowed to drape over the radiator. Shelves fitted above or in front of the radiator should also be avoided.

It is advisable to manually adjust all thermostatic radiator valves every 2–3 months to prevent them sticking. Ensure radiator valves are correctly set and not damaged.

Draughts

Try to ensure that draughts around doors, windows, letter boxes and keyholes etc. are reduced by using a suitable draught excluder.

WARNING

Air vents!

- ▶ Do not block or seal any air vents that are installed to ensure that the appliance operates safely.

Curtains

Lined curtains, or heavier full length curtains can provide excellent insulation. However, always ensure that the curtains do not drape over radiators.

13 Your guarantee

This appliance has a guarantee against faulty materials or workmanship from the date of installation subject to the following terms and conditions:

- During the period of this guarantee any components of the appliance that are proven to be faulty or defective in manufacture will be exchanged or repaired free of charge by Bosch Thermotechnology Ltd.
- The householder may be asked to prove the date of installation, that the appliance was correctly commissioned and, where appropriate, serviced to the satisfaction of Bosch Thermotechnology Ltd. These should be documented in the commissioning and service records in the Installation and Maintenance Instructions.
- The appliance has been used only for the normal domestic purposes for which it was designed.

This guarantee does not affect your statutory rights.

Guarantee registration

Your appliance/product carries a guarantee against faulty material or manufacture subject to Terms and Conditions.

To read the full Terms & Conditions please visit us on-line at www.worcester-bosch.ie/guarantee.

Your statutory rights are not affected by the manufacturer's guarantee

14 Energy consumption

The maximum heat output of this boiler can be adjusted to suit the exact requirements of the building. The process of adjusting the maximum heat output is commonly referred to as range rating. The new boiler is set at the maximum output and should be adjusted when it is installed and commissioned. In accordance with the standards, the declared space

heating efficiency, useful efficiency and NO_x values efficiency for this range rated boiler are not measured at the maximum output. To achieve the published efficiency and NO_x values, the gas rate should be reduced by your installer during commissioning (→ Installation and Maintenance instructions).

14.1 Product data on energy consumption

The information provided fulfills the requirements of regulations (EU) 811/2013 and (EU) 813/2013.

Specific precautions for installation, maintenance as well as recycling and/or disposal are provided within the installation and operating manuals. Read and follow the installation and operating manuals.

Product data	Symbol	Unit	7736702608
Product type	–	–	GC8700iW 40 H
Energy Efficiency Class	–	–	A
Range rated heat output	P _{rated}	kW	40
Seasonal space heating energy efficiency at range rated output	η _s	%	94
Annual energy consumption (average climate conditions)	Q _{HE}	kWh	--
Annual energy consumption	Q _{HE}	GJ	78
Sound power level, indoors	L _{WA}	dB	55

15 Open Source Software

15.1 List of used Open Source Components

This document contains a list of open source software (OSS) components used within the product under the terms of the respective licenses. The source code corresponding to the open source components is also provided along with the product wherever mandated by the respective OSS license.

Name of OSS Component	Version of OSS Component	Name and Version of License (License text can be found in Appendix below)	More Information
STM32 cube generated files	Unspecified	BSD (Three Clause License) (→ Kap. 15.3)	Copyright © 2016 STMicroelectronics Copyright © 2014 STMicroelectronics
STMC4Lib-IAR	Unspecified	BSD (Three Clause License) (→ Kap. 15.3)	Copyright © 2009 - 2015 ARM LIMITED Copyright © 2016 STMicroelectronics
stm32f30x	Unspecified	MCD-ST Liberty Software License Agreement v2 (→ Kap. 15.3)	Copyright © 2012 STMicroelectronics

Table 11

Provided that within certain OSS-Licenses (e.g. LGPL-2.0) necessary, reverse-engineering is allowed for the respective software component to the required extent. This shall not apply for other components of the software.

15.2 Used Commercial Source Components

15.2.1 This product contains software developed and licensed by SEGGER Software GmbH

15.3 Appendix - License Text
